

PROPOSED

CXXX Municipal Sustainable Building Policy

Hot Water and Photovoltaic Systems is a good general resource.

Sustainable building

Integrating building materials and methods that promote environmental, economic, and social benefit through the design, construction and operation of the built environment. Green building design encompasses the following areas: strategic site location, appropriate management of land, efficient use of energy and water resources, management of materials and waste, protection of environmental quality, and protection of occupant health/wellness and indoor air quality. Other terms used to describe green buildings include sustainable buildings and high-performance buildings.

Thermal imaging inspection

A procedure for identifying air leaks and thermal bridges in a building envelope using an infrared camera capable of detecting temperature variations.
